Boosting Efficiency: How Local Infusion Streamlined Inventory Ordering with Besse via WeInfuse's Distributor Connect Program

SUMMARY

Local Infusion, a fast-growing, multi-site infusion center organization, significantly improved its inventory management by utilizing the integrated electronic ordering systems of WeInfuse and Besse.

Through electronic data transfer between WeInfuse and Besse, Local Infusion gained real-time visibility into inventory levels, reduced manual errors, and streamlined the initial and reordering processes. The integration not only ensured timely delivery of necessary medications but also optimized stock levels, minimizing waste and overstock situations.
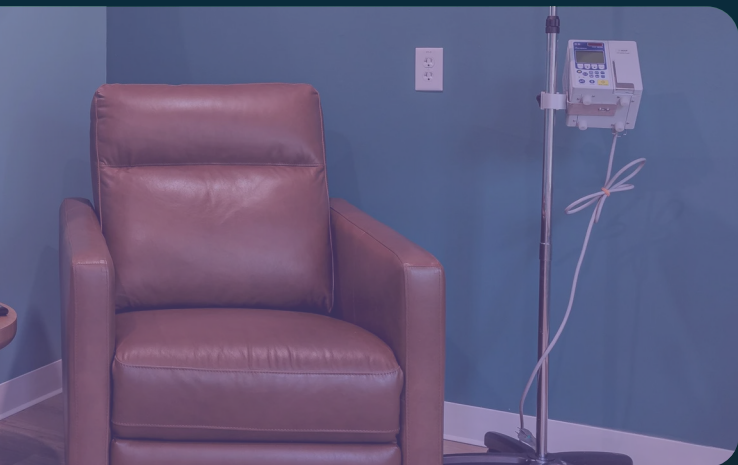

As a result, Local Infusion improved operational efficiency, enhanced patient care, and experienced a more cost-effective inventory system, allowing them to focus more on patient outcomes rather than cumbersome administrative tasks.

"eOrdering through the WeInfuse and Besse Medical integration has been life-changing, **saving our team 5-10 hours each week** in manual processes across functions."

- Angela Johnson,
Local Infusion Director of Implementation & Procurement

PROBLEM

Before implementing, Local Infusion faced several challenges common to many infusion centers. Their manual inventory management system was subject to inefficiencies, including: limited visibility into real-time inventory levels; time-consuming and error-prone processes; difficulty tracking medication usage across multiple locations; staff having to manually calculate dosages & reorder medications, often leading to delays or overstocking; and non-clinical staff managing drug orders, increasing the likelihood of mistakes.

SOLUTION

By leveraging WeInfuse and Besse's eOrdering technology, Local Infusion was able to address these challenges head-on. The solution provided:

- **Centralized Ordering:** Enabled Local Infusion to place inventory eOrders to Besse without having to leave the WeInfuse software.
- **Automated Purchase Order Creation:** Helped staff quickly identify all medications required to fulfill appointments within a selected date range while automatically generating purchase orders.
- **Real-time Besse Inventory Availability:** Allowed users to immediately see if a product is available, limited, or out-of-stock.
- **Improved Operational Efficiency:** Saved the Local Infusion team 5-10 hours per week which significantly decreased administrative burdens and time spent ordering inventory.

Through this integration, Local Infusion not only streamlined their operations but also positioned themselves for future growth, all while improving their ability to deliver exceptional patient outcomes.

THE KEY RESULTS

Streamlined inventory ordering	Automated efficiency	Decreased administrative work
